

## **AMENDMENTS TO THE ABSTRACT**

Please replace the original Abstract with the following new Abstract.

### **ABSTRACT OF THE DISCLOSURE**

An annular gasket is stationarily mounted on one coupler, and a tubular body is mounted for axial sliding movement within another coupler. The body has an outer wall formed with a sealing surface that sealingly engages the gasket in a sealed position, and with an outer channel that is spaced from the gasket in a bleed position in which pressurized fluid within the couplers is released to a bleed fitting.
